INFOSYSTEMS

General

Since 15 years InfoBASE is engaged in digital signage solutions. In close cooperation with our European customers from tourism and advertising industries we have developed our digital signage product InfoPLAYOUT. Its functionality covers the requirements of guest information and digital advertisement.

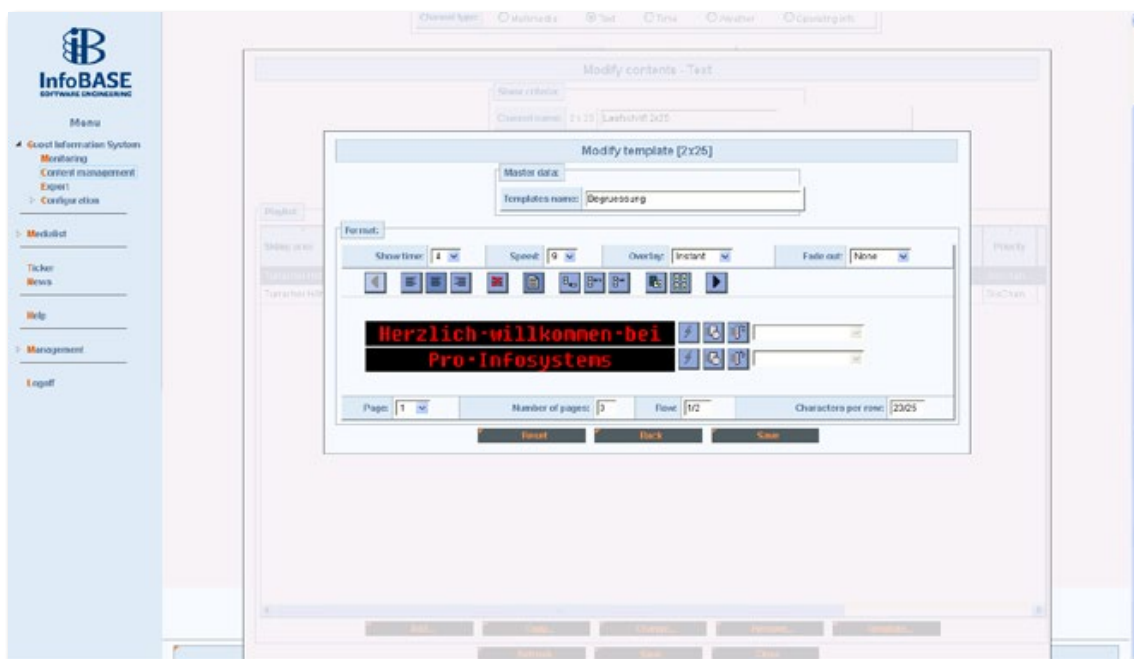

- 

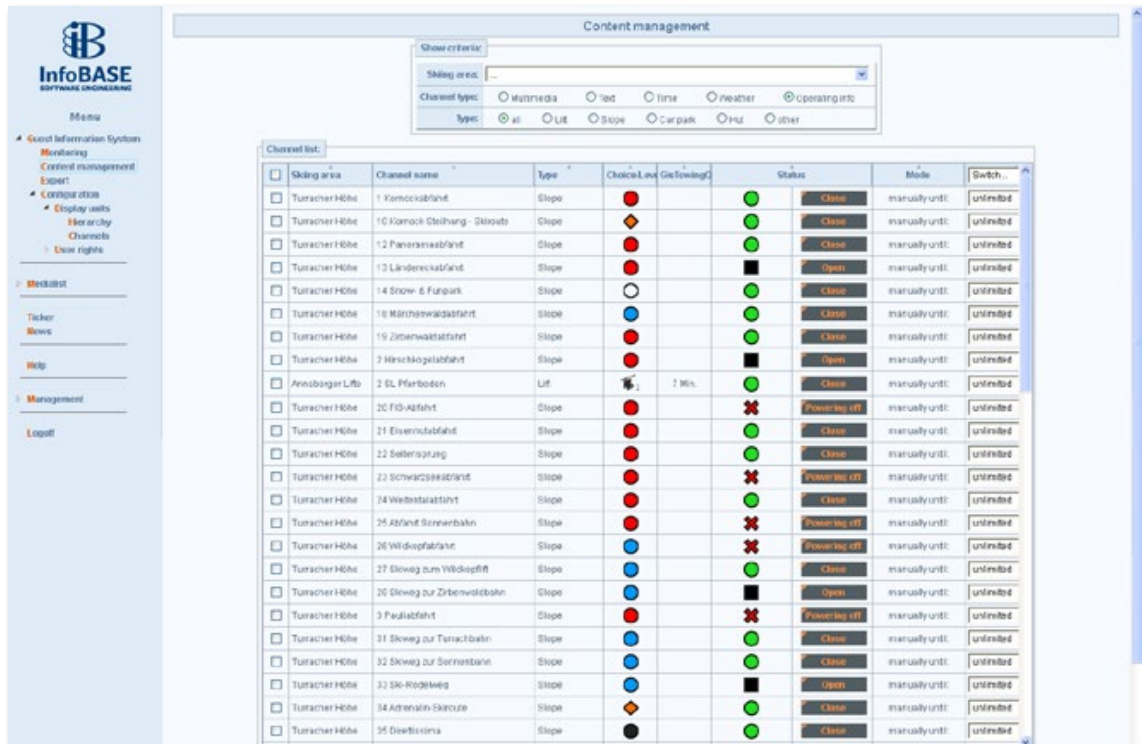

The information which should be displayed, will be stored in templates and is played depending on the given rules.

The display of operating status can be managed by authorized users or automatically depending on the defined rules.

InfoGIS also contains a user right concept, so that each user can be given individual rights and tasks.

Multiple modules can display the same information – therefore they can be assigned to the same information channel. Furthermore the modules can be time synchronized and switched on/off automatically. The modules must be connected to the server by LAN or using a GSM module.

The export function (XML file) allows to send current information from InfoGIS to external guest information systems (web site etc.). Data from external sources (weather station, neighbouring ski resorts etc.) can be loaded into InfoGIS via import function.

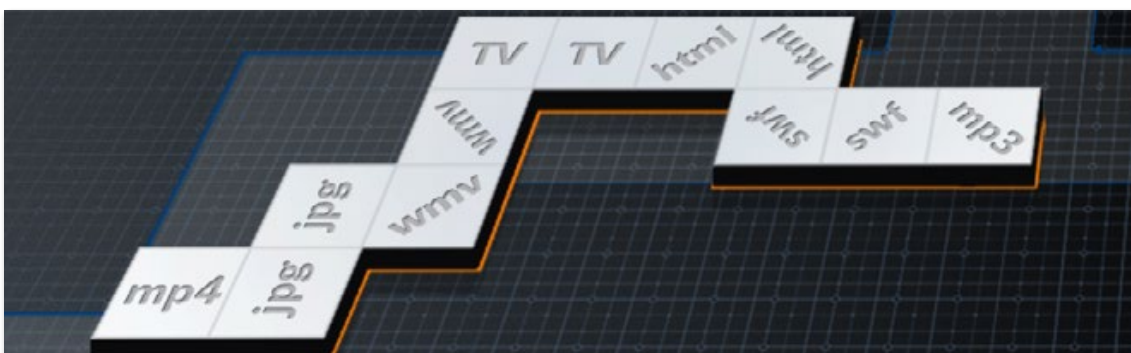

InfoMEDIALIST

InfoMEDIALIST is managing all media (videos, pictures, TV channels, HTML pages, web-cams) which should be displayed on the screens.

The media will be checked into the digital signage system and the file format will be checked automatically. If the file format check was successful, the media can be assigned to one or more channels.

For each media a layout and different time criteria (date from/to, time from/to, weekdays) can be chosen.

The playlist generation takes place automatically for each channel depending on the assigned media.

Of course, special events (press conferences, live broadcast etc.) can be displayed on the screens too.

The screenshot displays the InfoBASE software interface. On the left is a sidebar menu with options like 'Medien', 'Medienliste', 'Medien suchen', 'Medien einzeichnen', 'Abspielplan', 'Playliste senden', 'Ticker', 'News', 'Info', 'Verwaltung', and 'Abmelden'. The main area shows a table of media items with columns for 'Medienname', 'Kanal', 'Datum', 'Uhrzeit', 'Wochentage', 'Dauer', 'Layout', 'Reihenfolge', and 'Wiederholungen'. A modal window titled 'Abspielplan ändern' is open, allowing configuration for a specific media item. It includes fields for 'Medienname', 'Medientyp', 'Datum' (Von/Dis), 'Uhrzeit' (Von/Dis), 'Wochentage' (checkboxes for days), 'Wiederholungen' (Periodisch/Einmalig), 'Reihenfolge' (genaue Position, 13), 'Kanal' (Screen 46, Screen 65 Portrait), 'Layout' (Fullscreen_HD), and 'Dauer' (4 Sekunden). Buttons at the bottom of the modal include 'Zurücksetzen', 'Zurück', and 'Ändern'.

For using the system by different user groups, each user can be given individual rights for tasks, channels etc.

As producer of InfoPLAYOUT system we can implement also customer change requests.

You can test online our software InfoGIS and InfoMEDIALIST. Contact us – you will be impressed by the easy handling!
